Size

“Small and light!”

Compact and Easy to Use

The compact design for installation on AGVs, AGCs as well as in vertical guarding applications.

Size | Height 95.0× Width 80.0× Length 80.0 mm

Weight | 0.8 kg

Conformity Standards

IEC61496-1/3	Type3
IEC61508	SIL 2
ISO13849-1	PL d Category3
UL508	
UL1998	
UL61496-1	Type3
CSA C22.2	No. 14

Collision Prevention

32 area patterns to accommodate the AGV travel path for collision prevention.

Presence Detection

Detects humans or object entering the hazardous area.

Intrusion Detection

Detects access into critical zone. Reference boundary monitoring feature improves the safety by detecting the gaps around the protection zone and sensor's misalignment.

Expands The Range of Safety Applications

Protection over a Wide Range

Up to 5 meters of protection zone and 20 meters of warning zone configuration to suit various application requirement.

Data Output via Ethernet

Measurement data can be acquired via Ethernet with status of input/output signals and cyclic redundancy check code. Also supports command in SCIP2.0 protocol.

SD card for Configuration

Configuration data can be saved in a SD card which in turn can be used for configuring the UAM without connecting it to a PC. The feature is useful while replacing the UAM or configuring multiple units with the same settings.

Master-Slave Function

Maximum 4 units of UAM can be interconnected for Master-Slave operation when multiple units are required to guard the hazardous area. The system can be controlled by connecting the input and output signals to Master unit only.

Important Note: It is not possible to control the actuators via master-slave bus communication.

Encoder Input

In AGV applications, area is switched depending on the vehicle's speed. Speed and direction of travel provided via encoders are constantly monitored to switch the area and stop the AVG during abnormal travel.

Dual Protection Mode

UAM can simultaneously protect two hazardous areas. Separate OSSD signals are triggered for the respective protection zones making it possible to guard two machines with a single UAM.

Easy Configuration of Complicated Zones

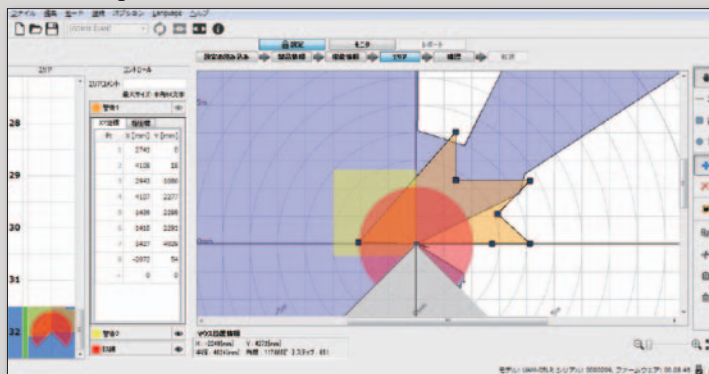

User Friendly Interface

Simple user interface to configure even a complicated zone by simultaneously viewing the measurement data. Zones can be configured with 3 different methods.
